

Micro- Spectrophotometer

Nano 100

The Nano-100 is a perfect instrument for micro-volume UV-VIS spectrophotometer. It can accurately measure DNA, RNA and Oligonucleotide concentrations, protein assays etc.. The Nano-100 utilizes CCD detector, a light source for long lifetime Xenon lamp, together with simple software. Simply pipette 0.5~2µl sample onto the pedestal, and the measurement can be completed within 5 seconds.

Features

- ❖ Turn on and instantly measure without lamp warm up time
- ❖ Full range of wavelength (200-800nm) with scan capability from 200-800nm within 5sec.
- ❖ User-friendly software with free software updates
- ❖ Simply pipette a sample onto the pedestal, measure, wipe the pedestal
- ❖ Direct micro-volume measurement with only 0.5-2ul sample required to accurately determinate nucleic acids and protein concentrations
- ❖ Long life Xenon flash lamp, 10 flashes, up to 10 years
- ❖ No cell or cuvette and expensive consumable required
